

# Reliable Up-to-date Information and Valuable Control

## *an Interview with Knut Rønning*

*(June 2009, Appendix to Finansavisen)*

*In tight economic times, ERP systems face heightened expectations. Executives, heads of departments, project managers, and other decision makers are now more dependent than ever on up-to-date information.*

### **Making the right decisions**

“Without up-to-date information, decisions rest on a shaky foundation. Important business decisions simply cannot be made based on historical data alone. Knowing immediately where one currently stands allows one to prudently proceed forward — reliable business intelligence is priceless.” Knut Rønning, finance director with XLEDGER, explains that real time updates of financial data enable instant responses to unplanned business situations and challenges.

### **Access to Information**

XLEDGER.NET, a true web based ERP solution, enables quick and secure access to company information vital for optimal control and leadership. Digital workflow and online documents ensure that everyone that should be involved in all or part of an administrative process are — without delays. Whether you want to check on the status of a project for a client, or to follow the financial developments in a department, XLEDGER.NET gives access tailored to every user.

Knut Rønning, Finance Director of XLEDGER

### **Business efficiency**

Knut Rønning also points out how XLEDGER.NET can give a competitive edge.

“To strengthen or uphold a competitive lead, it is important to have efficient control, and this requires that the administrative processes work well — not just at the core business level, but for everyone involved in daily operations. XLEDGER.NET improves efficiency for the whole company by industrializing administrative processes.

Our system provides efficient workflow sharing and automates manual processes, thus embedding many advantages previously only available to large corporations.”

### **Maintaining control**

“XLEDGER.NET provides an effective internal workflow. In the same way, it is possible to outsource, but still be in control. Whether accounting is outsourced to an external accounting firm, controlled by the internal business service center, or handled internally, you still have access to up-to-date financial information.”
