

an Interview with Helge Strømme

(June 2009, Appendix to Finansavisen)

Taking advantage of Cloud computing, XLEDGER has become a leading provider of true web based ERP systems.

“We are both proud and humbled by the confidence and trust in XLEDGER.NET demonstrated by close to 2000 customers and more than 70 accounting firms. The IT landscape is currently on the brink of a complete cloud computing revolution, and the XLEDGER.NET system has proved itself a necessary addition to the new digital era.”

The landscape is changing

In this article, we focus on what’s new among the IT giants (Google, Amazon, Microsoft, VMware), and how XLEDGER fits in. Since launching their new strategy called cloud computing in the fall of 2008, Microsoft is now offering their web services to a global market. This transition to an internet based platform fits hand in glove for XLEDGER.NET, an on-demand web based ERP system. Our decision to use central servers and internet technology instead of the Windows based application platform sets us apart. Today, online services, cutting expensive hardware costs, are radically changing the IT landscape.

Helge Strømme, Managing Director of XLEDGER

“

At XLEDGER, we have a vision to present up-to-date and relevant information concerning the financial condition of an enterprise in a language and format that leaders understand.

”

These online services include applications like Sharepoint, Livemeeting, and Outlook, as well as ERP solutions like XLEDGER.NET.

Up to date Information

-IT is more than technology. IT strategy can decide the ability, or lack of ability, of a company to handle information and larger transaction volumes. More and more, large entities understand the importance of making IT decisions at an executive level.

At XLEDGER, we have a vision to present up-to-date and relevant information concerning the financial condition of an enterprise in a language and format that leaders understand.

Too many executives and managers base their decisions on old and obsolete data. Today's challenging market, with low margins and high pressure, demands instant insight. XLEDGER.NET is enlightening for many, as they experience a new kind of control in business management. It is now possible to have the same relationship to financial information that we have with news; we want today's breaking news!

Simplifying your day

Always considering the present challenges and possibilities, we work to simplify your day. In addition to constantly enhancing user friendliness and functionality in XLEDGER.NET, we work to integrate with other computer systems, like business registers, billing systems, banks, cash registers, web-shops, and hand held devices. While we ensure the interoperability of these systems, you, as a client, can focus on your area of expertise.

A serious provider

XLEDGER is growing rapidly, financially healthy, and profitable. We have a long term commitment and serious focus to provide an up-to-date, on-demand ERP solution for a growing number of entities internationally.

“

XLEDGER is an innovative It is now possible to have the same relationship to financial information that we have with news; we want today's breaking news!
